## Indoor Air Quality Is Not a Choice. It's an Essential Requirement.

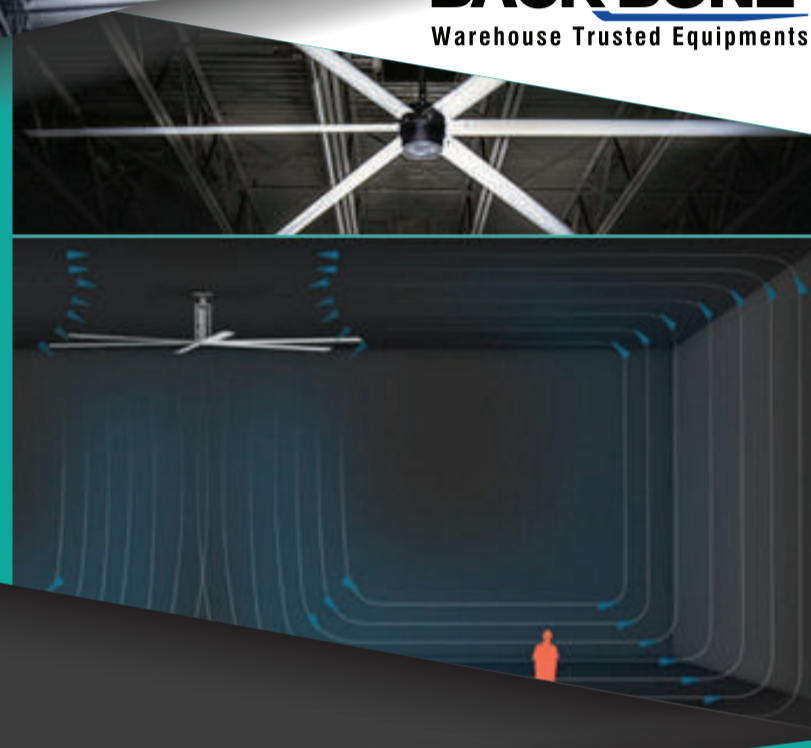

Indoor Air Quality Is Not a Choice. It's an Essential Requirement.

The EPA, CDC, OSHA, NIH and ASHRAE all indicate that employers must provide health and comfort for their employees.

These organizations have set IAC standards for:

- Eliminating pollution, contagions and viruses
- Controlling heat
- Managing humidity

HVLS fans help you achieve the IAQ standards, in turn improving worker health, comfort and performance.

## Work is Better with a Breeze

There are many factors to consider when planning for operations in your warehouse. Employee comfort is among the biggest concerns. A Warehouse Operations Manager from a facility that initially did not use HVLS fans stated his teammates concerns:

“Our teammates complained about the building being hot and not feeling comfortable.”

### Director of Distribution Operations

If an industrial facility's environment is too hot, cold, wet (sweating slab syndrome), stale or dry, the workforce will likely be much less comfortable and much less productive.
